

### UV-CURING INK SYSTEMS – THE ALTERNATIVE SOLUTION TO SOLVENT-BASED INKS

#### DATE ON REQUEST

**SEMINAR FEE:** EUR 295 per person  
Lunch, dinner and extensive training documentation included

#### SPEAKER:

**JOHANN BAUER**  
Manager Technical Application

**MARTIN KREMMETER**  
Laboratory, UV Ink Systems

**TILMAN GOERTTLER**  
EHS Department

UV-curing ink systems are established successfully in many screen printing segments. There is a large selection of UV-curing inks available for a wide range of applications.

UV technology offers many advantages, particularly in view of production, realization of creative and design specifications and environment protection. But working with UV products also differs significantly from working with conventional solvent-based inks. For a safe and successful use of UV inks you need to know their particularities with regard to applications, processing and curing. In this seminar we provide you with all necessary information.

- Compositions and functioning of UV inks
- Screen fabric and screen making for UV prints
- UV-curing systems ("UV dryer")
- Printing practice
- Possibilities and limits of UV ink systems
- Safe handling of UV-curing inks

The seminar is held in the Coates Screen Inks GmbH company building in Nuremberg.
